

# First AI Beased Network Analyzer

## Main Idea 💡

- 🧑‍🔬 Creation of software enabling network visualizations
- 💻 Support for lightweight Docker images and full VM if needed
- 🤖 AI in the form of a subscription that automatically:
  - Looks for potential threats
  - Looks for logical errors
  - Returns feedback about the implemented topology

## Additional ideas 🤔

- 🐱 Creating a platform similar to Github but with network projects
- 🌀 Offer a subscription model for serverleas Test Network platform

Role	Task
Front-End 🌐	Building a websaid to promote and seal project.
Back-End 🛠️	Creating a model for network analysis
Desktop 💻	Creating an Emulator
